DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see P.10, filed 01/15/09, with respect to 103(a) rejection of claims 1-4,22,24-26,35-37 and 40-42 have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 1,3,7-22,24,25 and 28-39 have been renumbered as 1-32, respectively.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance: prior art does not teach or suggest in combination of the combined limitations of an apparatus and a method comprising: receiving content from a host device for transmission via two or more tones in a multicarrier communication channel from two or more antennas; multiplexing elements of the received content among at least a subset of the two or more antennas; and interleaving the multiplexed elements across multiple tones of the multicarrier wireless communication channel on at least a subset of the two or

more antennas to generate a signal for transmission from the at least two or more antennas, wherein the received content is coded bits and the interleaving element comprises tone interleaving and adjacent or nearly adjacent coded bits on each of the antennae are mapped to nonadjacent subcarriers and wherein the interleaver depth determines how many tones separate adjacent coded bits, the separation between adjacent coded bits being a function of a coherence bandwidth of the channel (emphasis added); and an apparatus comprising: a diversity agent, coupled with a transmitter, to receive content from a host device and multiplex elements of the received content among at least a subset of two or more antennas and to interleave the multiplexed elements across multiple tones of a multicarrier wireless communication channel to generate a signal for transmission from the two or more antennas wherein the diversity agent comprises a tone interleaver, to map adjacent or nearly adjacent coded bits of the received content to nonadjacent subcarriers of the multicarrier wireless communication channel and wherein the separation between adjacent coded bits is a function of a coherence bandwidth of the channel (emphasis added).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sam Ahn whose telephone number is (571) 272-3044. The examiner can normally be reached on Monday-Friday.
